

**SITE NUMBER:** B-R8-05

**LOCAL NAME:** Unnamed

**WRIA:**

\*This site does not have a WRIA number due to channel is an overflow and intermittent in the winter

**NORTH COAST OFF CHANNEL SITE INVENTORY DATA**

**RIVER SYSTEM:** Bogachiel **DATE:** 8/30/89 **OBSERVER:** Young

**CHANNEL TYPE:** Lower end of small valley wall tributary.

**TRIBUTARY TO:** An overflow channel of the Bogachiel (20.0162)

**SITE LOCATION:** R.B. @ River mile - 20.4 (WDF)

**LEGAL DESCRIPTION:**

	UPPER END	LOWER END	RIVER TEMP
<b><u>WATER TEMP:</u></b>	13 C	13.5	15.5 C

<b><u>FLOW (CFS):</u></b>	Dry	0.1
---------------------------	-----	-----

**SUBSTRATE:** Muck and silt.

**SITE SIZE:**

- Length-** 170 - 200 m.
- Width-** Channel = 2 - 6 ft  
Water surface = 0 - 3 ft
- Depth-** 2 - 4 inches where watered.

**WATER SOURCE:** A small valley wall tributary. May be fed by additional small valley wall tribs during winter. May receives overflow from the river during major freshets.

**DIRECTIONS TO SITE:** Heading north on Hwy 101, turn right at mile post 186 (i.e. just north of the Bogachiel bridge and directly across from Bogachiel State Park) onto Undie Rd. Continue east approximately 4.8 miles on Undie Rd. then turn right onto an old grade just before Undie Rd bends to the left and begins heading up a long hill. The oldgrade crosses the trib and then B-R8-05 just after leaving Undie Rd.

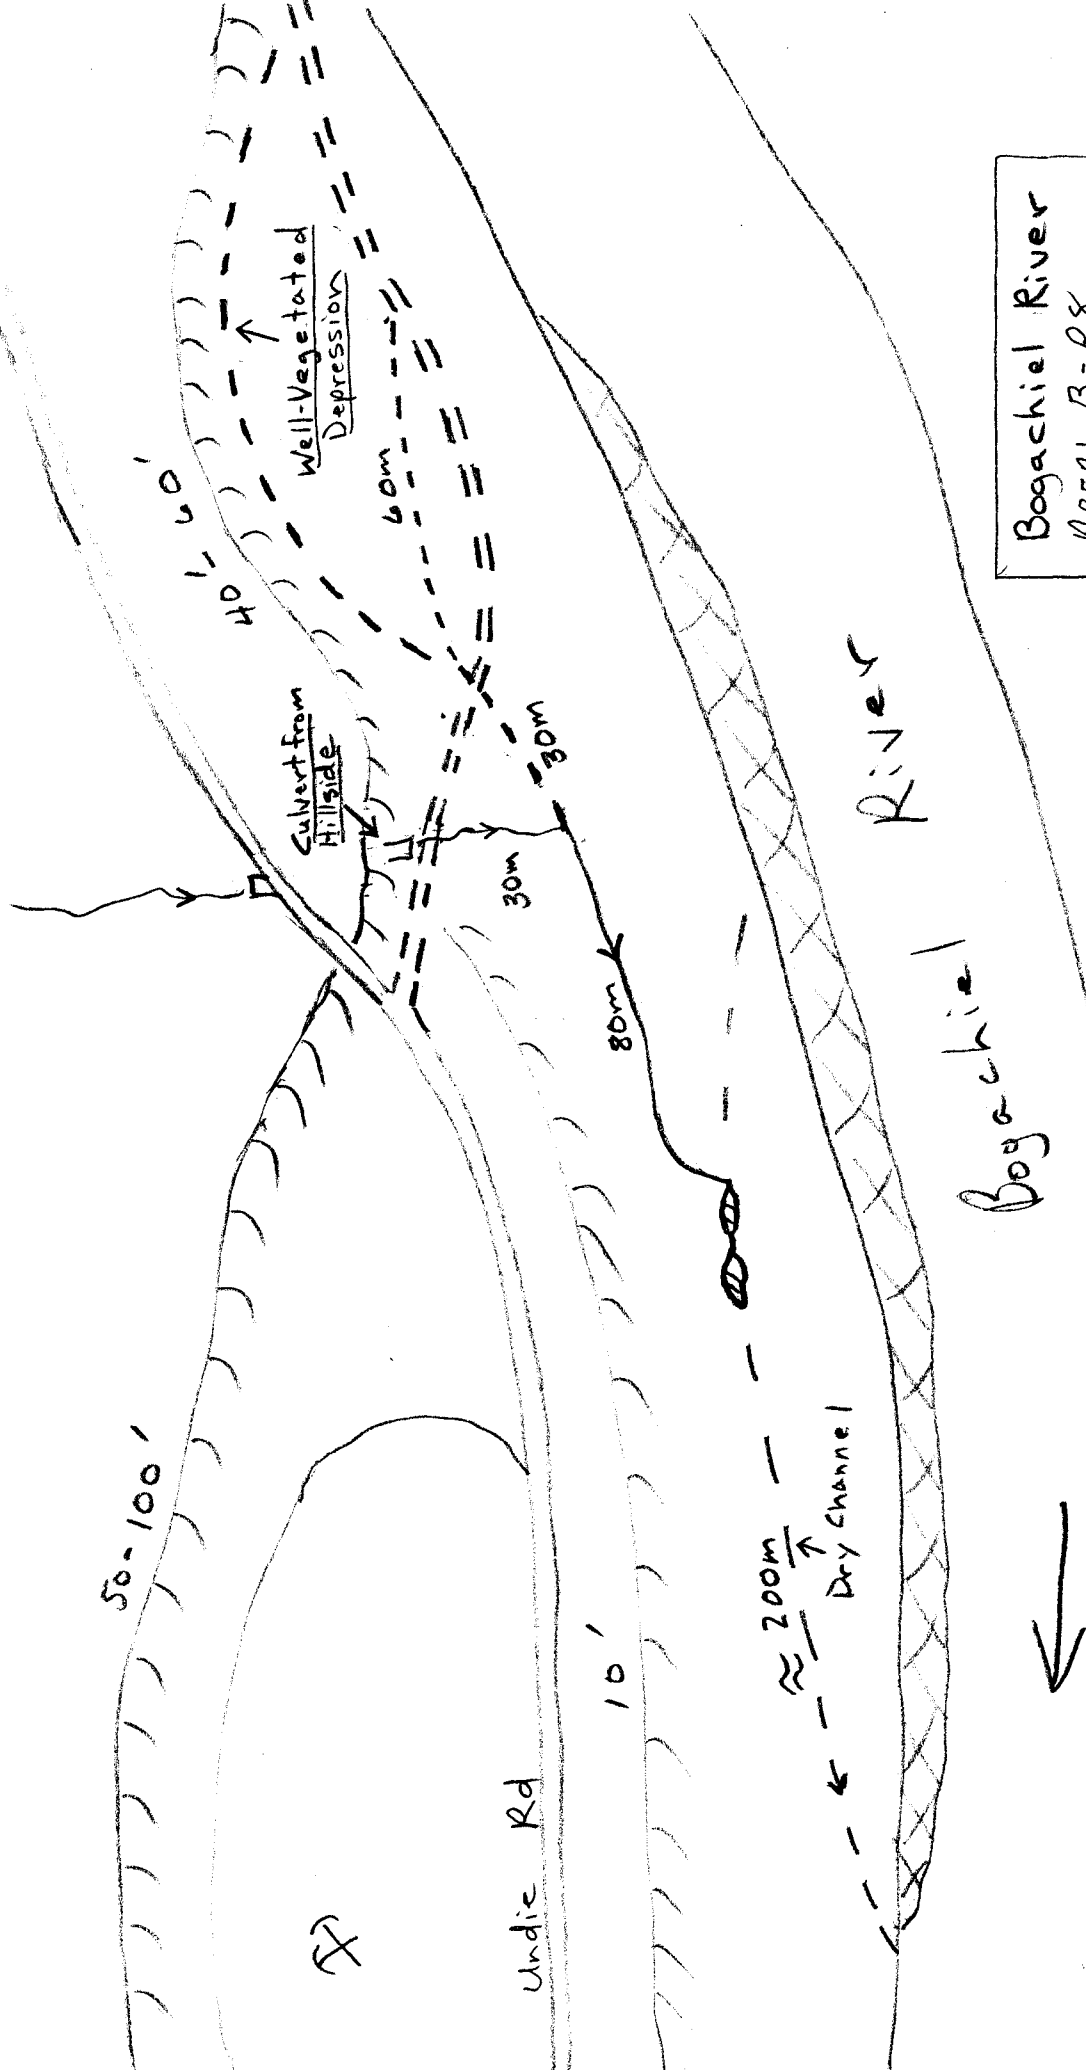

**FISH ACCESS AND CURRENT USE:** There is currently no access from the river to B-R8-05. A few coho fry were seen near the upper end of the useable water. A very limited amount of winter rearing may occur. Access is dependant on the flows through the overflow channel which is currently dry. Stranding may be a problem.

**FLOODING POTENTIAL:** Moderate.

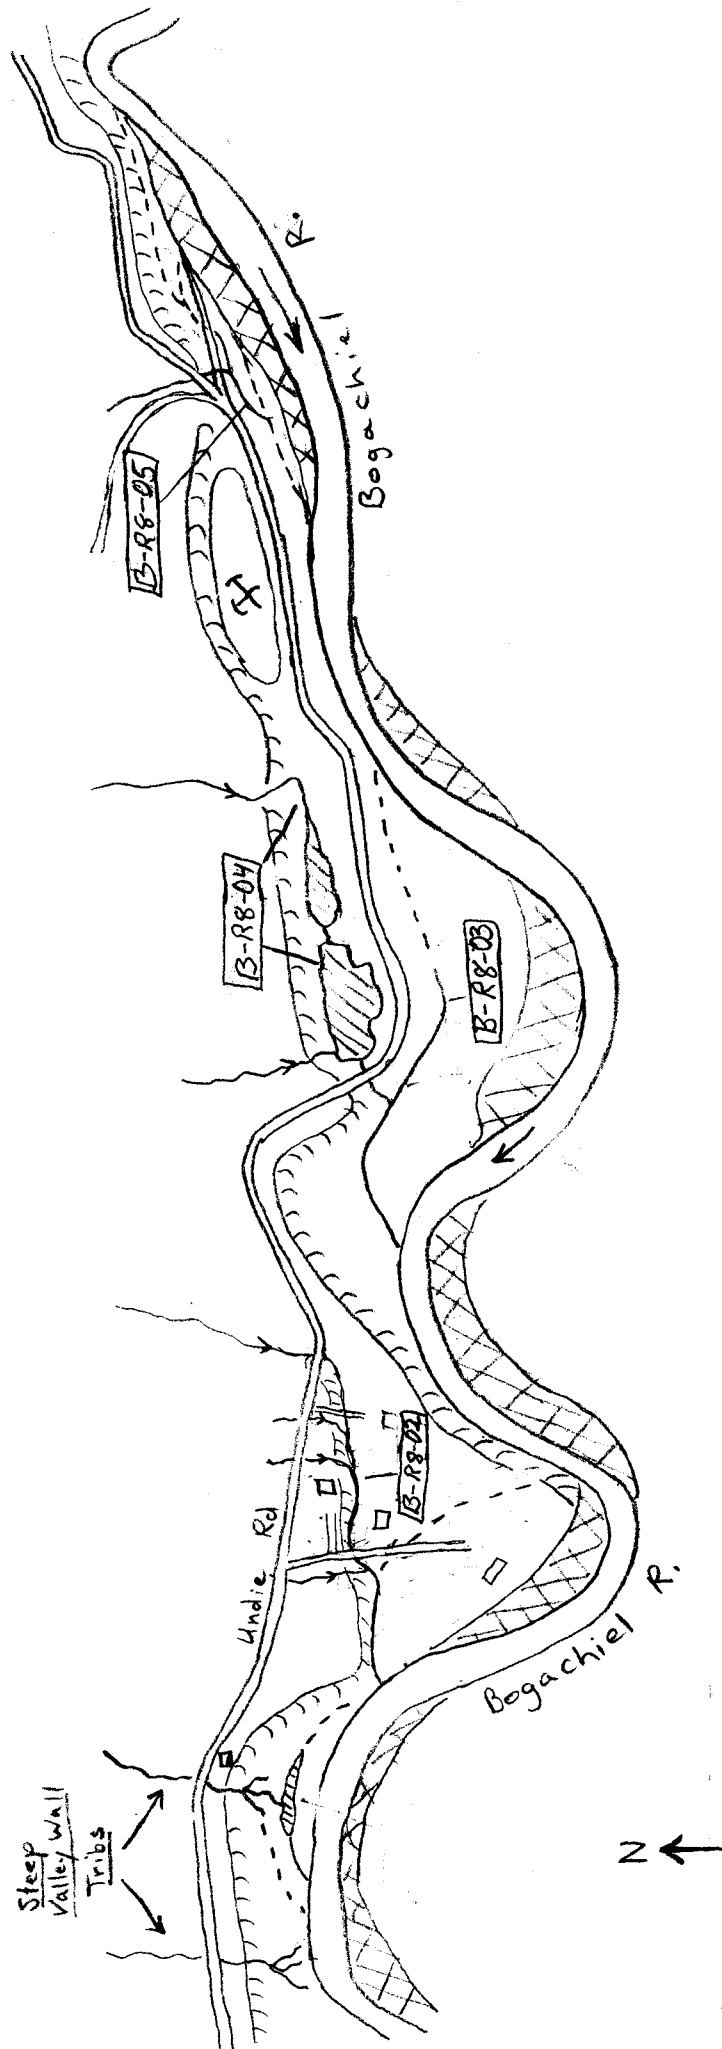

**LANDOWNER:** Unknown at this time.

**COMMENTS & RECOMMENDATIONS:** B-R8-05 lies along a narrow strip of land between the right bank of the Bogachiel and the steep valley wall. It flows into the upper end of a 200 m long side channel that is currently dry. At present B-R8-05 is fed by one small v. wall trib. entering 80 m above it mouth. The upper 60 m of B-R8-05 is a brushy depression that is also presently dry. B-R8-05 seems to offer little enhancement potential. However, a better evaluation could probably be made after observing the channel throughout the fall & winter.
